

Design Engineer

Join a rapidly growing renewable energy company that matters to the future! National Energy is accelerating the construction of our Solar & Wind portfolio and is looking for exceptional candidates to strengthen our project and construction management teams. We are recruiting for a highly skilled and driven **Design Engineer** based in our offices in Marousi, Athens.

Responsibilities:

- Delivers the Conceptual & IFC and As Built designs for the Renewable Energy Solar/PV projects
- Leads the technical design process of PV projects
- Manages external engineering contractors
- Ensures technical compliance of tender proposals
- Undertakes and reviews software simulations of energy generation to determine system efficiency and system performance indicators.
- Working closely with internal key stakeholders and teams for the successful execution of tasks
- Measuring Project performance using appropriate systems, tools and techniques and proactively following up as needed.
- Creating and maintaining comprehensive Project documentation.
- Provides ad hoc assistance for Development function and other business units.

Candidate Profile:

- Bachelor's Degree in Electrical or Mechanical Engineering.
- Minimum of **2 years** of work experience in Solar PV Project Design
- Sound knowledge of software programs (i.e. AutoCAD, PV Syst, PVcase, Virto Solar, MSOffice)
- Excellent organization and time management skills.
- Team-player with strong communication skills.
- Familiarity with Wind Energy and Energy Storage systems principles will be considered an advantage.
- Professional working proficiency of Greek and English language.
